Date	31 October 2026
Team ID	XXXXXX
Project Name	Global Fuel Prices and Taxation Analysis (2020–2026)
Maximum Marks	2 Marks

Customer Journey Map

Map out the stakeholder's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Explore & Discover	Stage 2 Analyze & Compare	Stage 3 Decide & Act
Actions What does the stakeholder do?	• Opens the Global Fuel & Tax Dashboard • Reviews high-level KPIs: Total Countries (84), Avg Petrol & Diesel Price, Global Subsidy Total • Scans global price overview across regions	• Filters by fuel type (Petrol, Diesel, LPG) • Compares tax percentage vs net pump prices • Evaluates regional diesel price trends and volatile transit corridors	• Summarizes core fiscal and supply chain insights • Shortlists high-tax vs heavily subsidized country segments • Exports customized Tableau dashboard views and reports
Touchpoint What part of the service do they interact with?	• Dashboard 1: KPI Tiles (Prices, Tax %, Subsidies) • Global Fuel Price Overview & Regional Maps	• Policy Tax Heatmaps & Tax vs Price Scatter Plots • Diesel Price Distribution Maps & Volatility Index • Brent Crude vs Retail Pass-Through Charts	• Income Level vs Tax Burden Cross-tabulations • Regional Volatility Forecast Models • Tableau Export & Reporting Options
Customer Thought What is the stakeholder thinking?	• "What is the current macro state of global fuel prices and taxation?" • "Which global regions carry the highest energy costs?" • "Can I quickly read and navigate this data across 84 countries?"	• "Which governments subsidize fuel and which tax heavily?" • "How severely do crude oil price fluctuations impact freight costs?" • "Are fuel prices correlated with national income levels?"	• "How should we restructure transport routes to minimize fuel cost risk?" • "Do the tax metrics support our fiscal policy reform proposals?" • "Can I clearly communicate these findings to leadership?"
Customer Feeling What is the stakeholder feeling?	**Curious but slightly overwhelmed** by the massive volume of multi-fuel records across 84 countries and 7 global regions.	**Engaged and focused.** Interactive filters and synchronized cross-tabulations make comparative policy analysis clear and insightful.	**Confident and satisfied** with data-backed evidence to drive government policy, supply chain logistics, and research decisions.

Process Ownership & Opportunities

Execution Details	Stage 1 Explore & Discover	Stage 2 Analyze & Compare	Stage 3 Decide & Act
Process Ownership Who is in the lead on this stage?	Data & Analytics Team maintains dataset integrity; Policy Consultants & Supply Chain Managers review top-level KPIs.	Business Intelligence Analysts and Energy Researchers lead targeted comparative, tax, and volatility analyses.	Policy Consultants (Dr. Sarah Mitchell) & Supply Chain Directors (Marcus Thompson) lead executive decision-making.
Opportunities How can we improve this stage?	• Add tooltip descriptions explaining tax vs subsidy calculations • Include quick-filter presets for major trade corridors (e.g., EU, APAC) • Automatically highlight top 5 most volatile fuel markets	• Add multi-country side-by-side tax comparison mode • Incorporate global crude price benchmark overlay lines • Enable cross-chart filtering across all dashboard views	• Add automated PDF executive summary exports • Include 12-month predictive forecast models for logistics planning • Add key policy takeaway callouts to visual outputs
