Project Design Phase-I
Problem Solution Fit Template

Problem Solution Fit Template:
The Problem-Solution Fit simply means that you have found a problem with your target user and that the solution you have realized for it actually solves the user's problem. It helps analysts, planners, and policy advisors identify behavioral patterns and recognize what would work and why.

Purpose:

- ☑ Solve complex problems in a way that fits the operational state of your target decision-makers.
- ☑ Succeed faster and increase solution adoption by tapping into existing BI mediums and analytical channels.
- ☑ Sharpen your communication strategy with target visual triggers and data-backed messaging.
- ☑ Increase touchpoints with your stakeholders by finding the right problem-behavior fit and building trust by solving frequent analytical annoyances or costly forecasting errors.
- ☑ Understand the existing market scenario in order to improve it for your target groups.

Canvas Overview:
The full 10-block **Problem-Solution Fit Canvas 2.0** is detailed on Page 2, providing a complete structural mapping of customer segments, root causes, existing behavior, and our Tableau BI solution.

SMARTBRIDGE
Let's bridge the Gap

AMALTAMA

Problem-Solution Fit Canvas 2.0: Give energy decision-makers an interactive view of taxation, supply chain volatility, and macroeconomic correlations so they can make faster, data-driven decisions.

1. CUSTOMER SEGMENT(S) CS

- Policy Consultants advising energy ministries (Dr. Sarah Mitchell).
- Supply Chain Directors managing freight networks (Marcus Thompson).
- Energy Economics Researchers (Prof. Elena Rodriguez).

6. CUSTOMER CONSTRAINTS CC

- Large, scattered datasets (27k+ records across 84 countries) hard to unify manually.
- Limited analyst bandwidth for multi-currency tax & subsidy normalization.
- Need easy, interactive views without requiring custom code.

5. AVAILABLE SOLUTIONS AS

- Static PDF report summaries: familiar, but non-interactive and quickly outdated.
- Commercial oil reports: high cost and lack customizable country-level filtering.
- Fragmented government ministry web portals.

2. JOBS-TO-BE-DONE / PROBLEMS JP

- Identify high-tax vs. heavily subsidized fuel markets globally.
- Track multi-fuel trends (Petrol, Diesel, LPG) & forecast prices.
- Evaluate Brent crude spot price pass-through to retail rates.
- Compare fuel affordability across country income levels.

9. PROBLEM ROOT CAUSE RC

- International fuel tax policies & subsidy schemes are stored in isolated repositories.
- Lack of unified dashboards connecting raw commodities to retail pump prices.
- Decisions frequently rely on partial or delayed market data.

7. BEHAVIOUR BE

- Manually construct Excel pivot tables and cross-reference multiple raw CSV files.
- Search oil news feeds & fiscal policy updates for regional benchmarks.
- Present static findings to executive boards and research panels.

3. TRIGGERS TR

- Sudden crude market shocks or geopolitical freight price spikes.
- Government announcements of fuel subsidy phase-outs or carbon tax reforms.
- Annual corporate logistics budgeting cycles.

10. YOUR SOLUTION SL

- **Interactive Tableau Dashboard Suite:** Global Fuel Prices & Taxation Analysis.
- *Policy View:* Tax Heatmaps, net tax/subsidy indicators.
- *Logistics View:* Diesel distribution maps & volatility forecasting.
- *Research View:* Income level cross-tabs & Brent correlation.

8. CHANNELS OF BEHAVIOUR CH

- **Online:** Tableau Public, web browser dashboard links, packaged (.twbx) extracts.
- **Offline:** PDF executive briefs presented in policy meetings & logistics strategy reviews.

4. EMOTIONS: BEFORE / AFTER EM

Before: Overwhelmed, uncertain, and frustrated by fragmented, disconnected fuel data.

After: Confident, in control, and equipped with defensible evidence for policy and supply chain decisions.
