PROJECT INITIALIZATION AND PLANNING PHASE

Date	31 October 2026
Team ID	XXXXXX
Project Title	Global Fuel Prices and Taxation Analysis (2020–2026)
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a Business Intelligence solution to address critical challenges in understanding international fuel markets. With a clear objective, defined scope, and concise problem statement, the proposed solution details the approach, key features, and resource requirements.

Project Overview	
Objective	To build interactive Tableau dashboards that give energy policy consultants, freight logistics directors, and economics researchers a unified, data-driven view of global fuel prices, taxation policies, subsidy structures, price volatility, and Brent crude spot price correlations (2020–2026), enabling confident strategy and policy decisions.
Scope	Analysis of the global fuel prices dataset covering 84 countries, 27,468 records, 7 world regions, 4 national income-level tiers, and multi-fuel types (Petrol, Diesel, LPG) alongside Brent crude spot prices across 2020–2026. Delivers an integrated Tableau dashboard suite tailored for three distinct user personas. Out of scope: real-time streaming exchange feeds and automated trading execution algorithms.

Problem Statement	
Description	Global fuel market data (retail prices, national tax burdens, subsidy programs, income tiers, and raw crude benchmarks) is massive and scattered across disparate government, industry, and international reports. Consequently, decision-makers struggle to evaluate which nations levy the highest tax burden, where fuel price volatility impacts transit routes, and how crude market shocks transmit to consumer pump prices.
Impact	Solving this problem provides decision-makers with a single, trustworthy analytical tool. It speeds up policy formulation, protects freight transport margins against unexpected price spikes, clarifies energy affordability across income groups, and supports evidence-based carbon taxation and subsidy reform.

Proposed Solution	
Approach	Connect Tableau Desktop to the structured global fuel dataset (2020–2026), standardize multi-currency fields, compute calculated measures for Tax Share %, Net Subsidy Amounts, Regional Volatility Index, and Crude Pass-Through Coefficients, and combine worksheets into three interactive, scenario-driven dashboards with dynamic quick-filters, synchronized highlights, and detailed tooltips.
Key Features	• Top KPI tiles (84 countries covered, average petrol & diesel retail prices, aggregate subsidy totals, average tax share %). • **Scenario 1 (Policy):** Geographic tax heatmaps, subsidy vs. price scatter plots, percentage tax distribution analysis. • **Scenario 2 (Logistics):** 2020–2026 multi-fuel trend charts, global diesel distribution maps, regional volatility index tracking, and 12-month predictive price forecasting. • **Scenario 3 (Research):** Income-level fuel affordability cross-tabulations, crude spot price pass-through correlation models, and structural fuel comparison matrices.

Resource Requirements:

Resource Type	Description	Specification / Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard workstation or laptop with Intel Core i5 / AMD Ryzen 5 (4+ cores); standard display adapter; GPU optional.
Memory	RAM specifications	8 GB RAM minimum (16 GB recommended for high-performance extract querying).
Storage	Disk space for data extracts and workbooks	At least 5 GB available SSD storage space for data files, Tableau Hyper extracts, and packaged workbooks (.twbx).
Software		
Frameworks	Analytics & BI Platforms	Tableau Desktop for data modeling, visualization, and dashboard construction; Tableau Public for sharing interactive web views.
Libraries	Built-in Charting & Logic Engines	Tableau native visual types (filled maps, heatmaps, scatter plots, dual-axis trends, box plots, cross-tabs), Calculated Fields, and LOD Expressions.

Resource Type	Description	Specification / Allocation
Software (Cont.)		
Development Environment	IDE, data tools, version control	Tableau Desktop, Microsoft Excel / CSV handling tools; workbook files saved and versioned as .twb / .twbx files with cloud backup repositories.
Data		
Data Resources	Source, size, structure, format	Global Fuel Prices and Taxation dataset (CSV/Excel) comprising 27,468 rows across 84 countries, 7 world regions, 4 income tiers, tracking Petrol, Diesel, LPG, Tax %, Subsidy Flag, and Brent Crude prices for 2020–2026.
