Project Name	Global Fuel Prices and Taxation Analysis (2020–2026)
Maximum Marks	5 Marks

Business Question and Visualization Report

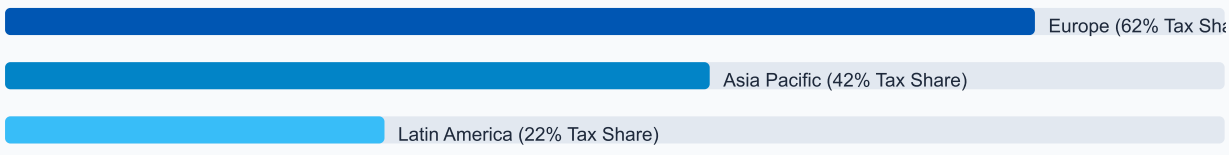

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions.

Business Questions and Visualisation: The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visual dashboards that deliver policy, supply chain, and research clarity.

1. Which countries and global regions levy the highest tax percentages on retail petrol and diesel?

Visualization: Geographic filled map and stacked bar chart of tax percentage share by country and region.

Screenshot of Visualisation: Global Fuel Tax Burden Heatmap

2. How heavily do net fuel subsidies depress retail fuel prices across different regions?

Visualization: Packed bubble chart of subsidy amounts by region and country.

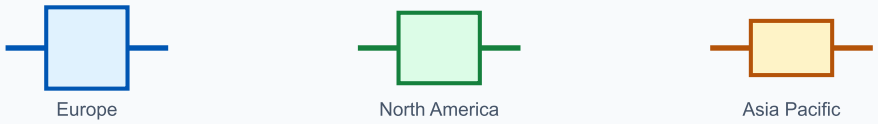

Screenshot of Visualisation: Global Fuel Subsidy Distribution

3. How does retail diesel price distribution vary across major international freight corridors?

Visualization: Box plot of diesel prices ($ per liter) by geographical region.

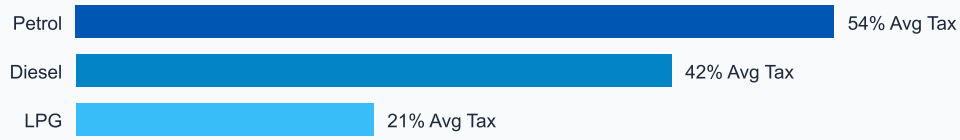

Screenshot of Visualisation: Diesel Price Spread Box Plot

4. Which commodity fuel types (Petrol, Diesel, LPG) carry the highest national tax proportion?

Visualization: Bar chart of average tax percentage by fuel category.

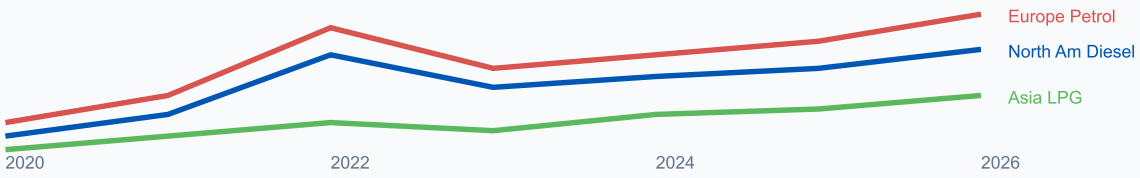

Screenshot of Visualisation: Tax Share % by Commodity Fuel Type

5. How have annual retail fuel prices trended over time (2020–2026) across key economic regions?

Visualization: Multi-line chart of annual retail prices ($ per liter) over model years 2020–2026.

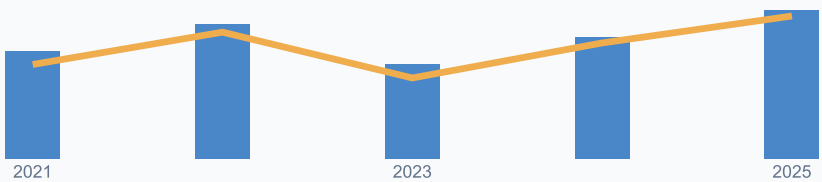

Screenshot of Visualisation: Multi-Year Fuel Price Trends (2020–2026)

6. How strongly do Brent crude oil spot prices correlate with retail petrol prices?

Visualization: Dual-axis bar and line chart of retail petrol prices overlaid with Brent crude spot rates ($/barrel).

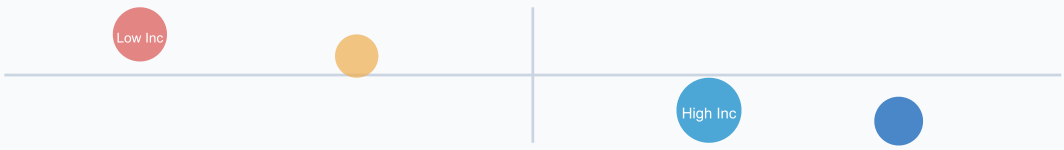

Screenshot of Visualisation: Brent Crude Pass-Through Correlation Model

7. What is the relationship between country income level (World Bank Tiers) and fuel price volatility?

Visualization: Scatter plot of Volatility Index vs. Per Capita GDP / Income Level tier.

Screenshot of Visualisation: Income Tier vs Volatility Index Scatter Plot

8. How do national fuel tax policies impact overall environmental carbon reduction targets across regions?

Visualization: Regional stacked area chart of CO2 tax revenue allocations and carbon offset impact.

Screenshot of Visualisation: Regional Environmental Tax Policy Impact
