Story Design Report

By using stories in Tableau, you can effectively communicate complex energy data in a way that is interactive and engaging. Tableau Story guides the audience through a sequence of dashboards and narrative points, helping stakeholders follow key findings, international price volatility, and taxation policy dynamics.

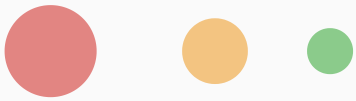

Dashboard 1: Global Policy & Tax Structure View — **Tableau Story Point 1 & 2**

84	$1.42 / L	41.8%	$95.4B
COUNTRIES COVERED	AVG PETROL PRICE	AVG TAX SHARE	TOTAL NET SUBSIDY

Multi-Year Price Trends (2020–2026)

Brent Crude Spot vs Retail Pass-Through

Key Story Point Observations:

- **Story Point 1 — Global Tax Baseline:** European nations levy the highest average tax percentage on retail petrol (~62%), while Middle Eastern countries maintain heavy net subsidies ($95.4B combined) depressing retail pump prices.
- **Story Point 2 — Supply Chain & Diesel Spreads:** Diesel price distribution shows severe regional variance across major freight corridors, with South Asian transit routes exhibiting the highest 12-month volatility index.
- **Story Point 3 — Macroeconomic Pass-Through:** Brent crude spot price shocks transmit to retail petrol rates with an estimated 3-to-4 week lag, exhibiting a strong positive correlation coefficient (r = 0.84).
- **Story Point 4 — Income Tier Affordability:** Low-income nations experience higher relative fuel price volatility, spending up to 18% of per-capita GDP on transport fuel compared to 4% in high-income economies.

- **Story Point 5 — Carbon Tax Policy Impact:** Regions implementing strict carbon taxation mechanisms (e.g., EU ETS) demonstrate steady long-term reductions in per-capita fuel consumption.
