Project Name	Global Fuel Prices and Taxation Analysis (2020–2026)
Maximum Marks	2 Marks

Ideation Phase
Define the Problem Statements

Customer Problem Statement Template:
Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your analytical products.

I am	*Describe customer with 3-4 key characteristics - who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" they care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	*Describe what problems or barriers stand in the way - what bothers them most?*	Describe the problems or barriers that get in the way here
because	*Enter the "root cause" of why the problem or barrier exists - what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	*Describe the emotions from the customer's point of view - how does it impact them emotionally?*	Describe the emotions that result from experiencing the problems or barriers

Reference Example:

Project Problem Statements Matrix

Defined problem statements across key target stakeholders for the **Global Fuel Prices & Taxation Analysis (2020–2026)** project:

Problem Statement (PS)	I am (Customer Persona)	I'm trying to	But	Because	Which makes me feel
PS-1	**Dr. Sarah Mitchell** *Policy Consultant at a Global Energy Institute*	evaluate international fuel tax structures, compare net subsidy impacts, and assess tax-to-retail price proportions across 84 countries	tax rates and subsidy mechanisms are highly fragmented and difficult to evaluate across different regions simultaneously	there is no centralized interactive platform that maps tax policy intensity alongside gross fuel price structures	**Frustrated and uncertain** when advising governments on fiscal energy policy reforms.
PS-2	**Marcus Thompson** *Supply Chain Director at a Global Freight Corporation*	track global diesel price trends, forecast fuel costs, and isolate high-volatility regions to optimize international logistics routes	unexpected fuel price spikes and regional diesel cost disparities destabilize operational transport budgets	historical fuel data lacks predictive forecasting models and multi-fuel regional volatility metrics in one view	**Anxious and stressed** about overshooting operational budgets and failing transport cost targets.
PS-3	**Prof. Elena Rodriguez** *Energy Economics Researcher*	analyze fuel affordability across country income levels and evaluate the pass-through correlation of Brent crude spot prices to retail petrol	global raw energy datasets are disconnected, making multi-variable econometrics slow and error-prone	macroeconomic indicators, crude spot prices, and retail fuel rates are stored in isolated, static spreadsheets	**Constrained and impeded** because generating rigorous economic research takes weeks of manual cleanup.
